

Don Anh Nguyen

Full Stack Software Engineer

Austin, TX | donanhnguyenjobsearch@gmail.com | (714) 270-4035 | [LinkedIn](#) [Portfolio](#) [Github](#)

Skills:

Python, Javascript, Typescript, React.js, Ruby, Ruby on Rails, Java, MVC, Redux, SQL, HTML, CSS, Node.js, MongoDB, Express.js, Git, AWS, RESTful APIs, Front End, Full-Stack Web Development, NoSQL

Experience:

Gibber Chat (Startup)

Software Engineer

06/2023 to 12/2023

- Spearheaded the design and implementation of sub-conversations within chat rooms across web and mobile platforms, resulting in expansion of the user base by 20%.
- Developed group chat functionality for Android mobile application utilizing ReactJS, React Native, MongoDB NoSQL database, and RESTful API, contributing to increased engagement and retention metrics.
- Optimized database models and revamped API controllers for changing user language, improving efficiency by 30% through reducing the number of required API requests, boosting system performance.
- Implemented simplified log-in experience with external Google Auth0 API and JWT authentication.
- Collaborated with developers through Git version control, merging pull requests and resolving merge conflicts.
- Worked in an Agile environment, partnering with the project manager on feature ideas and system improvements with tasks assigned in Trello.

Projects:

- [Photo Sharing Application](#): Designed and developed full stack application utilizing MongoDB database, with base64 image encoding/uploading, notifications tab, and user search bar.
- [Budget and Expense Manager](#): Developed budget and expense manager with Ruby on Rails RESTful API, MVC architecture, PostgreSQL database, and D3.js for data visualization.
- [Hotel Booking Application](#): Developed hotel booking application utilizing React UI, MongoDB, and Node.js with dynamic search filter page and hotel rating system.
- [E-Commerce Store](#): Built shopping application with Ruby on Rails authentication, PostgreSQL database, React, Redux, and Webpack, implementing features such as item inventory, marketplace search, filter, and sort, and add-to-cart checkout.
- [BlackJack JS](#): Developed a fully functional Blackjack game written in vanilla Javascript, HTML, CSS.

Education:

Western Governors University

2024

Bachelor of Science, Software Engineering

Data Structures & Algorithms, Computer Science Fundamentals, Relational Database Management

AWS Certified Cloud Practitioner

2024

University of California, Santa Barbara

2015

Bachelor of Arts
