Experience

Gibber, Chat Application Start-Up

Remote

Software Developer Intern

July 2023 - November 2023

- Designed and developed sub-conversations within chat rooms on both web and mobile applications, resulting in refined user experience.
- Developed the ability to create group chat conversations on mobile Android application using React Native.
- Took charge of front-end and back-end development by optimizing database models, enhancing UI of chat rooms and messages, and revamping API controllers to improve system usability.
- Partnered closely with the project manager on feature ideas and system improvements.
- Skills: Javascript, React.js, React Native, MongoDB, Express, Node.js, HTML/CSS, NoSQL.

Github Portfolio

Full Stack Developer

January 2023 - Present

- [Nguyenstagram](#): Designed and developed full stack photo sharing application utilizing the MERN Stack, allowing users to upload photos, like, comment, share, receive notifications, and search for users' profiles.
- [Budgeting App](#): Developed full stack budget and expense manager with Rails API and PostgreSQL database, which users can create user account, manage budget by month, add, edit, delete expenses, and display monthly budget data via D3.js pie chart.
- [HotelStays](#): Architected full stack hotel booking application utilizing React UI, MongoDB, and Node.js which users can book & cancel reservations, browse hotels based on booking date and city, sort listings based on price and rating, and review hotels.
- [LightsaberBay](#): Designed and developed full stack shopping application with Rails authentication, PostgreSQL database, and React UI, implementing features such as inventory of items, purchasing items from marketplace, sending messages to other users, and add-to-cart checkout.
- [BlackJack](#): Developed a fully functional Blackjack game written in vanilla Javascript, HTML, and CSS.

*additional projects and details in portfolio.

Meta Platforms Inc.

Austin, TX
